

DUTTON PARK FARM

Access:

The reserve can be reached by walking along the public footpath adjacent to the Weaver Navigation Canal from Acton Bridge.

Location: The reserve is north west of Northwich. It lies alongside the River Weaver (O.S. Grid Ref.: SJ583765).

Habitat Summary

The reserve is wet grassland. This has suffered from previous poor grazing management, but it is hoped sensitive grazing by our rare-breed cattle will help restore plant species diversity.

There are a number of ponds across the site. Fish have been removed from these to allow the amphibian life to thrive.

Don't forget to submit your records via the link on the CWT website reserves page.
